A WORD TO OUR FRIENDS AND PATRONS

We take pleasure in presenting to our patrons our price list for the season of 1929, thanking them for past favors and soliciting a continuance of same. We aim to have every deal a satisfactory one. Our stock is first class and will be packed in the best manner.

How to Reach Our Yard in Oakland—Take any Oakland, Berkeley or Alameda car, transfer to Piedmont avenue car, get off at Forty-first street, near Piedmont Key Route Station. Patrons from San Francisco take Key Route ferry boat to Oakland; then the Key Route train for Piedmont Station.

Planting—We use every precaution to deliver healthy, vigorous stock, but the measure of your success will depend upon the planting and care given, as careless or ignorant handling kills thousands of fine trees and plants every season. Avoid unnecessary exposure of roots to the air. In the case of evergreens that are "balled," **do not remove the burlap.** Plant as received; only cut the string around the top, then **loosen the burlap after the tree is set.** If you cannot plant immediately on receipt, **always "heel" in the trees so their roots may be in contact with good soil. An hour's exposure of roots to wind or sun may kill any tree; this is especially true of evergreens. In planting cut off the bruised or broken roots with a sharp knife.**

If the soil is good and properly prepared, only a hole large enough to easily take the roots need be dug, but better results can always be obtained by digging out a large space and filling in with good top soil. In setting the trees, do not put deeper than they stood in the nursery, excepting some dwarfs, which go a little deeper. But now comes the important detail, the neglect of which is responsible for many failures—

Be sure to pack the earth solidly around the roots. Leaving the ground loose after planting has caused tremendous losses that generally and are unjustly blamed to the nurseryman. Another cause of great loss is the wind working the newly set trees loose from the soil. This kills them. Always stake newly set trees if in a windy situation. After trees are set, make a plan of the grounds, marking the different varieties; then remove the wire labels, as they may damage the growing limbs.

Warranty—While we exercise the greatest care to have all our trees and plants genuine and reliable, and hold ourselves prepared to replace, on proper proof, all that may prove untrue to name, we do not give warranty, expressed or implied, and in case of error on our part it is mutually agreed between the purchaser and ourselves that we shall not, at any time, be held responsible for a greater amount than the original price of the trees.

ROSES

In offering our list of roses this year, we call your attention to the first-class quality of our stock, being strong two-year-old, budded plants, grown in this vicinity under identical conditins as our climatic conditions.

We might also point out that in buying roses from us you are securing varieties which have been tested in the Bay district and have been found to be satisfactory, while a good many kinds of those sold from sources outside of the State, though perfectly satisfactory under certain conditions, may not prove to be so in our cool climate around the Bay.

Planting should be done as early in the spring as the condition of the soil after or during the rains will permit. You can plant, however, almost continually through the season, using later, when growth has started, plants that have been potted for that purpose. Best results are obtained from early planting. Plant an average distance of 2½ to 3 ft. apart, depending upon variety.

Plant in good, well fertilized soil, keeping fertilizers away from the roots; plant deeply about from 2–4 in. deeper than the place where the plants have been budded and trim all while setting, although usually we trim all roses before sending them out.

Water freely all through the summer, more so in light soils than in heavy ones, but do not water late at night; this will cause excessive mildew.

Spray early and at least once a month with Blackleaf 40 to keep insects and other pests in check.

For mildew dust with powdered sulphur as soon as the first sign of it appears, or spray with Volck; it is almost impossible, however, to keep all roses free from mildew.

Old roses should be trimmed between the middle of December and the middle of February.

Mulch in the winter time with well rotted manure if obtainable.

Thuya Orientalis Pyramidalis — Like the above, more upright grower. Balled plants. 3–4 ft., $4.00; 4–5 ft., $5.00.

Thuya Orientalis Beverleyensis — Upright golden variety, very effective for specimen planting. Balled plants, 3–4 ft., $5.00.

EVERGREEN TREES AND SHRUBS

These are to be distinguished from the Coniferous evergreens, because they have an evergreen and flowering value combined and the planting effect is different. No place or planting is complete without some of these shrubs, of which a large number are bearing colored berries, adding to color effects, and this class as a whole being indispensable as a setting to the house or background for annual and perennial plants, forming, so to say, the framing for the landscape picture. Plant them freely if space permits.

Abelia Grandiflora — Glossy green foliage, evergreen shrub, flowering through the summer; flowers pink. Potted and balled plants, 2½–3 ft., $1.50; 1½–2 ft., $1.00.

PERENNIAL PLANTS

Perennial plants are indispensable in the garden and are not planted enough. It is true that perennials do not give the satisfaction through the summer that annuals do, because they do not flower continually, but if these are properly mixed with annuals, with a knowledge of color combination and time of flowering, the effect will be very pleasing and a lot of satisfaction derived from it. Besides, most of the perennials last for a great number of years and the expense is small, considering the service they give.

LAWN MOWERS

We stock Caldwell and Baby Grand Mowers. Prices on application. We will be glad to furnish any particular kind of lawn mower you desire, at competitive prices.

DUSTERS AND SPRAYERS

There is a great deal of spraying to be done in the garden in order to keep the plants in good condition, and it pays to get good tools for this work. It saves a lot of labor and annoyance. After testing different makes, we have decided to take on the E. C. Brown Sprayers, which we found the most reliable and reasonable in price. The following we recommend for garden use:

No. 50-D—Automatic compressed air sprayer, galvanized, 2 gallons capacity, for **$5.50.**

No. 50-B—Automatic compressed air sprayer same as above, made of brass, **$7.50.**

No. 9-D—Automatic compressed air sprayer, same as above, made of galvanized iron, 3 **gallons capacity, $6.50.**

No. 9-D—Automatic compressed air sprayer, same as above, 3 gallons capacity, brass, **$9.50.**

Brown's Miston Sprayer—Atomizer, 1 gallon cap, **$1.95.**

Brown's Continuous Sprayer—1 quart cap, a very handy small sprayer, **$1.50.** This one beeats the cheap tin sprayers. With glass container, **$1.25.**

Brown's Dusters, for sulphur, etc., **45c, $1.00** and **$1.25.**

Bellows—Duster—$2.25.

Tin Sprayers, the old-fashioned kind, **35c** and **50c** each.

Sprayers are always subject to corrosion and should be well cleaned after using. The brass sprayers will always last longer than the galvanized ones, so it pays to buy them.
